**Wood-Fired Hot**  
**Tub Manual**

**Congratulations on your Tubza  
wood-fired hot tub! Follow  
these steps for a safe and  
enjoyable experience.**

## **Step 1: Setting Up**

- **Attach the heating coil pipes to the tub using the provided hose clamps. Ensure they are tightly secured for efficient heating.**

## **Step 2: Filling the Tub**

- **Fill the hot tub with water to your desired level, always keeping the water level higher than the top outlet pipe.**

### **Step 3: Starting the Fire**

- **Begin with kindling. Once it's burning well, add larger logs to maintain a steady flame.**

### **Step 4: Fire Safety**

- **Never leave the fire unattended. Keep a close watch, especially if children are nearby.**

### **Step 5: Safety Around Pipes**

- **Be cautious not to step on the heating coil pipes to prevent burn injuries and potential damage to the connections.**

## **Step 6: Cover and Stir for Optimal Heating**

- **Use a cover to retain heat while heating. Every 10-15 minutes, gently stir the water for even heating.**

## **Step 7: Heating Time**

- **It typically takes 1.5 to 2 hours to raise the water temperature from 14°C to 35°C.**

## **Step 8: Wood Usage**

- **Plan to use approximately 2 bags of wood to achieve the desired temperature.**

## **Step 9: Water Maintenance**

- **Refill the tub every 3rd day or if the water appears dirty. Consider adding a cartridge filter and a spa tablet for extended water preservation.**

- 

## **Step 10: Enjoy and Relax**

- **Once the water is at your desired temperature, step in, relax, and enjoy the soothing benefits of your Tubza wood-fired hot tub.**

- 

**Remember, safety is paramount. If you have any questions or need assistance, don't hesitate to reach out.**
